

QUALITY CONSOLIDATION

Until 1990, Quality Controls were only run on manufacturing processes. This was with the aim of controlling the production department and preventing problems.

Starting in 1992, Pikolin went further, and established global Quality Systems for the whole company, since it believes that Quality Control is a dynamic and integrated process for monitoring the company at all levels.

In this new enterprise culture, workforce training is at the core of our Quality Proposition, since it is a strategic and competitive factor.
